

Environmental Policy

Alpine Works is committed to meeting its obligations under current legislation and compliance 14001 obligations, to minimise the impact on the environment of our operations, whilst accounting for stakeholder requirements.

Furthermore, it is our policy to not only meet such obligations but also to take all practical steps to continually reduce our “environmental impact” and prevent pollution of the environment, whilst conserving resources. In support of this policy we will seek ways to reduce the impact of what we do by, reducing waste and energy consumption in all aspects of the business.

We examine all aspects of the business for energy and material use and any waste. We determine where renewable resources can be employed, where energy savings can be achieved and where waste reduction can be influenced, then work to introduce steps to carry this out.

- We establish objectives for reducing environmental impact and have plans to achieve them.
- We monitor our environmental impacts and our effectiveness in reducing them.
- Where we fail to meet objectives, steps are taken to improve performance.

To support our environmental aspirations, we operate a management system in line with the international ISO 14001 standard aimed at continually improving our environmental performance. Wherever practical we encourage our suppliers, Clients and staff to join with us in reducing the effect we all have on the environment. It is our firm belief that stewardship of the environment rests with us all and that we should all play our part in ensuring future sustainability for our business and all interested parties.
